

# Process Modeling, Process Improvement, and ERP Implementation

# Learning Objectives

- ❖ Use basic flowcharting techniques to map a business process
- ❖ Develop an Event-driven Process Chain (EPC) diagram of a basic business process
- ❖ Evaluate the value added by each step in a business process
- ❖ Develop process improvement suggestions
- ❖ Discuss the key issues in managing an ERP implementation project
- ❖ Describe some of the key tools used in managing an ERP implementation project

# Process Modeling

# Introduction

- ❖ Tools that can be used to describe business processes
  - Flowcharts, event process chains
  - Not specific to ERP
  - Can help managers identify process elements that can be improved
- ❖ Role of process-modeling tools in ERP implementation projects

# Process Modeling

- ❖ Business processes can be quite complex
- ❖ **Process model:** any abstract representation of a process
- ❖ Process-modeling tools provide a way to describe a business process so that all participants can understand the process
- ❖ Advantages of process models
  - Graphical representations are usually easier to understand than written descriptions
  - Provide a good starting point for analyzing a process
    - Participants can design and implement improvements
  - Document the business process
    - Easier to train employees to support the business process

# Flowcharting Process Models

## ❖ Flowchart

- Any graphical representation of the movement or flow of concrete or abstract items
- Clear, graphical representation of a process from beginning to end
- Uses a standardized set of symbols

## ❖ Process mapping

- Often used interchangeably with flowcharting
- Specifically refers to activities occurring within an *existing* business process

# Process Types and Hierarchies

## 1. Individual processes

- Carried out by a single individual

## 2. Vertical or Functional processes

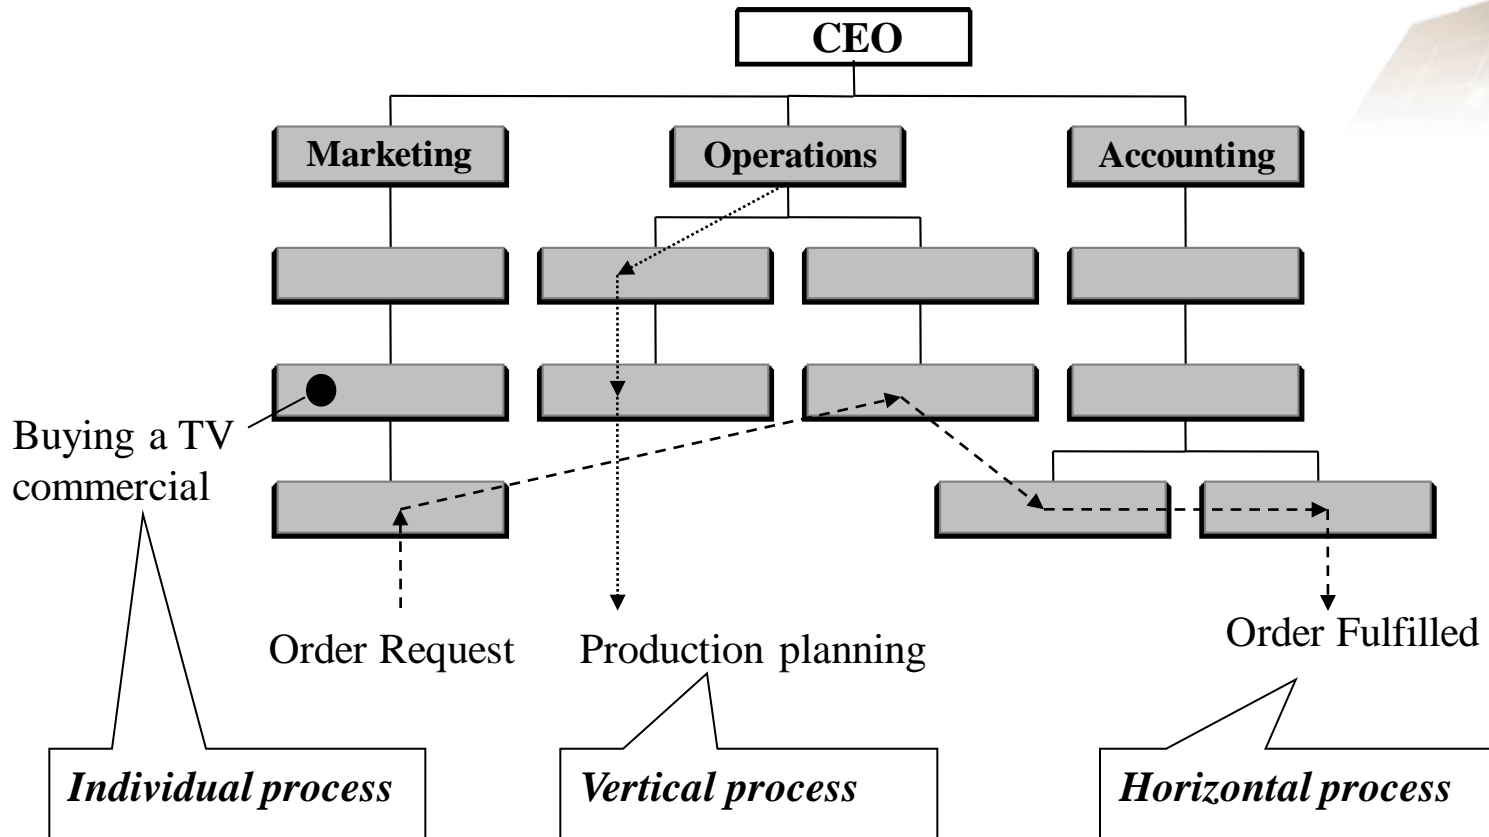

- Contained within one functional unit or department

## 3. Horizontal or Cross Functional processes

- Spans several functional units, departments or companies

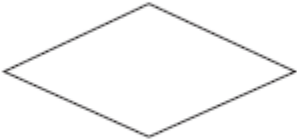

# Illustration: Process Types and Hierarchies

# Basic Flowcharting Symbols

	Boundaries (beginning/end of process)
	Operation
	Decision
	Direction of logic
	Connector

# Example: Fitter Snacker Expense Report Process

- ❖ Maria, Fitter Snacker salesperson
  - Completes a paper expense report after travel
  - Makes a copy for her records
  - Attaches receipts for any expenses over \$25
  - Mails it to her zone manager at the branch office
- ❖ Kevin, zone manager
  - Reviews expense report
  - Approves report or mails it back to Maria asking for explanation, verification, or modification
  - After approval, mails it to corporate office
- ❖ Process at corporate office
  - Accounts payable (A/P) clerk

❖ Partial process map for Fitter Snacker expense-reporting process

# Process Boundaries

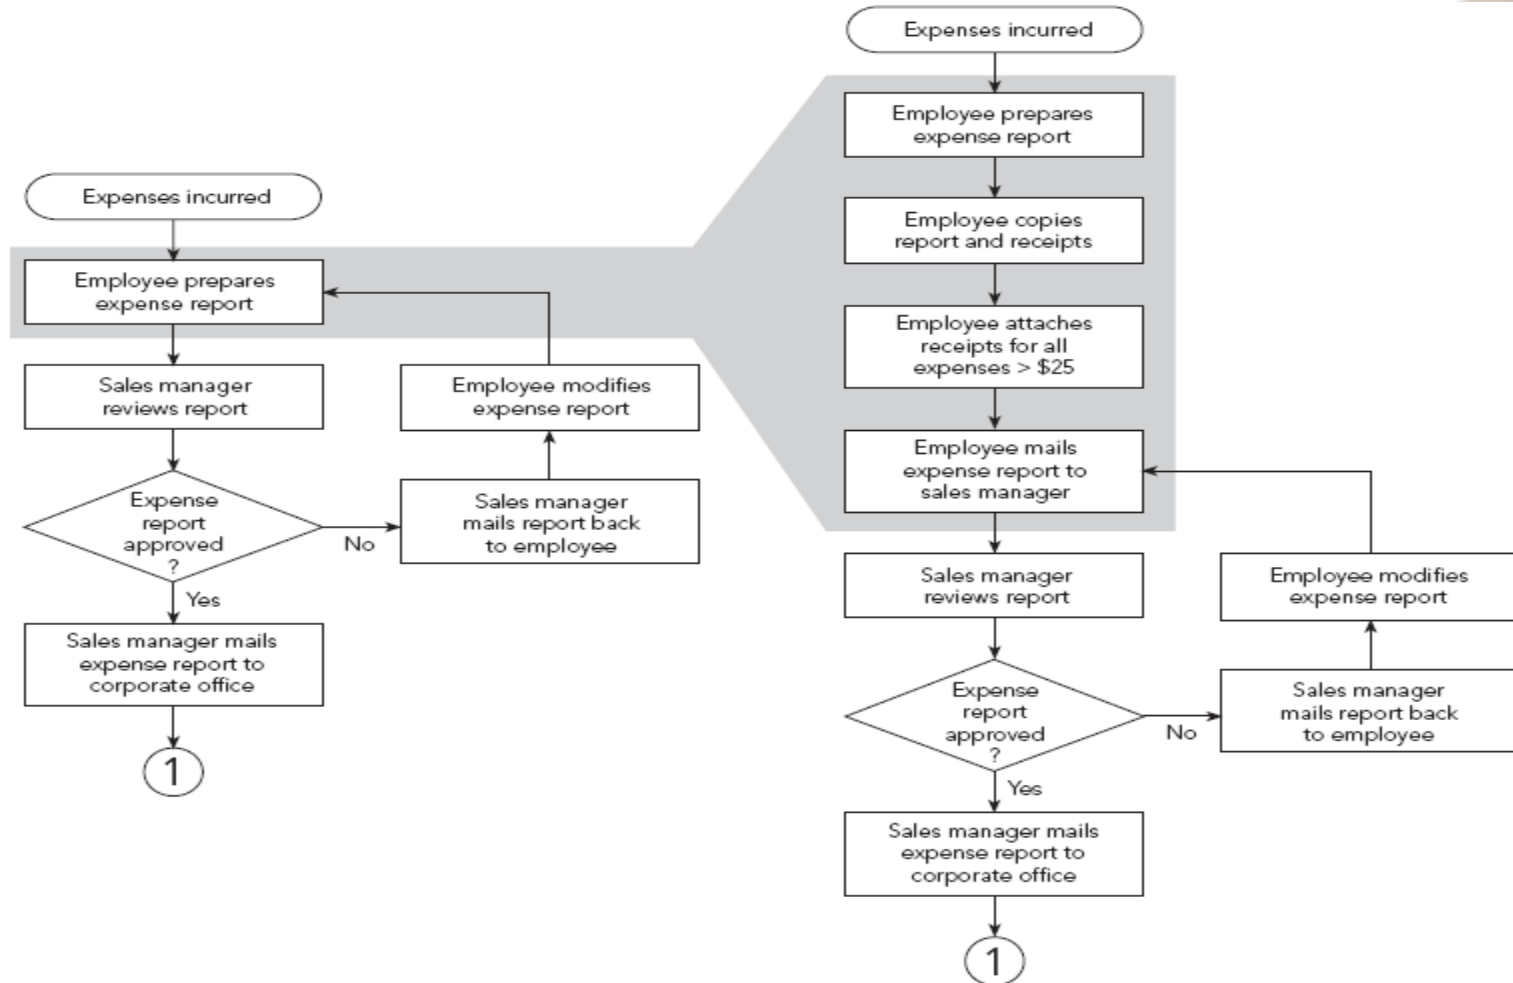

- ❖ **Process boundaries** define:
  - Which activities are to be included in the process
  - Which activities are considered part of environment—external to process
- ❖ All processes should have only one beginning point and one ending point
- ❖ Decision diamond asks a question that can be answered with “yes” or “no”

# Extensions of Process Mapping

- ❖ **Hierarchical modeling:** ability to flexibly describe a business process in greater or less detail, depending on the task at hand
- ❖ Modeling software that supports hierarchical modeling
  - Provides user the flexibility to move easily from higher-level, less detailed views to the lower-level, more detailed views

# Hierarchical modeling

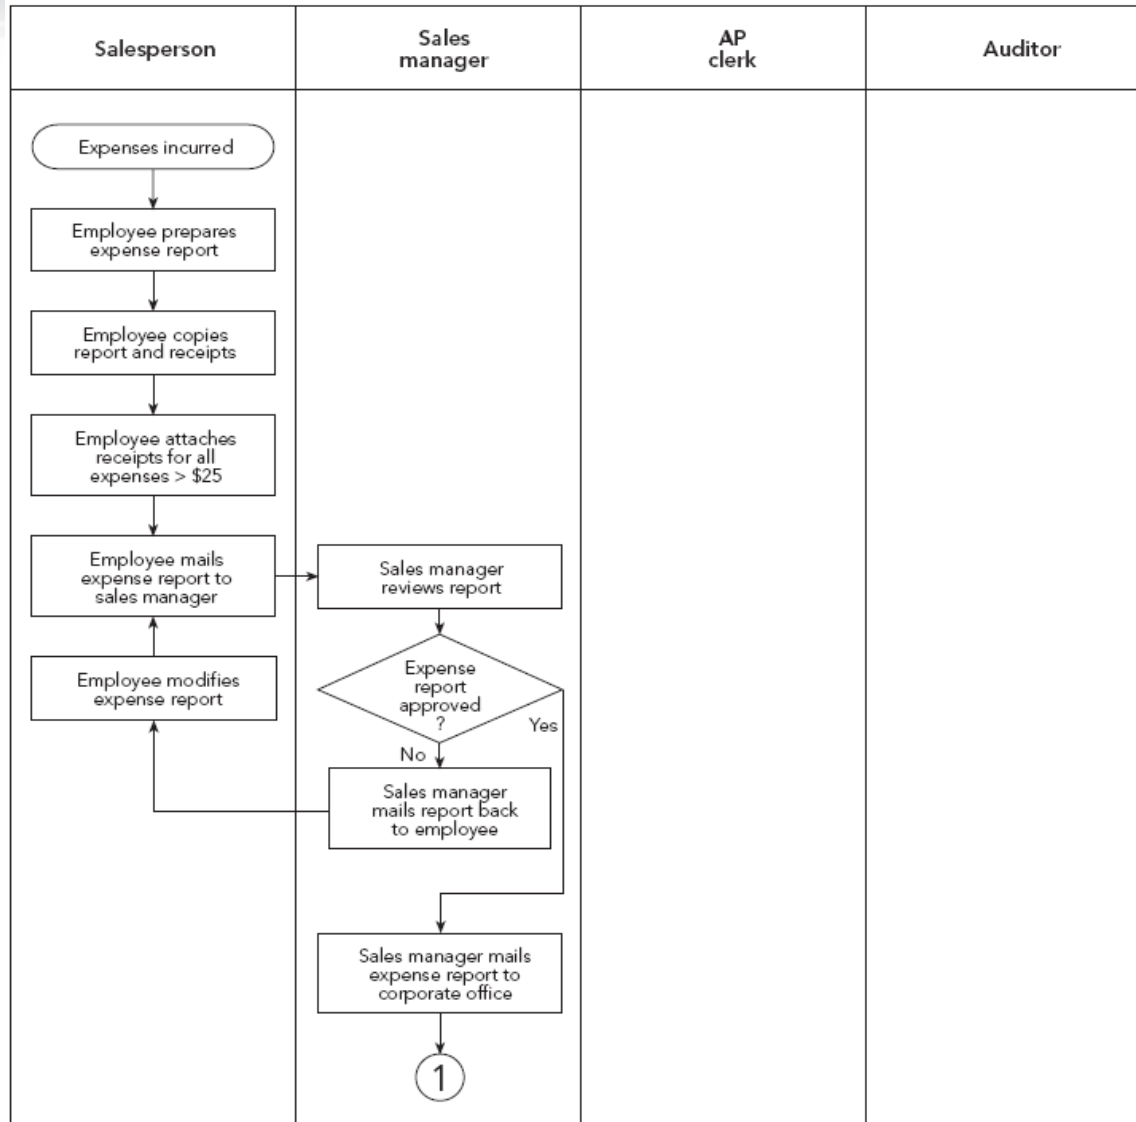

# Extensions of Process Mapping [2]

## ❖ Deployment flowcharting

- **Swimlane flowchart**
- Depicts team members across the top
- Each step is aligned vertically under the appropriate employee or team
- Clearly identifies each person's tasks in the process

# Example Swimlane Flowchart

# Event-driven Process Chain (EPC) Diagrams

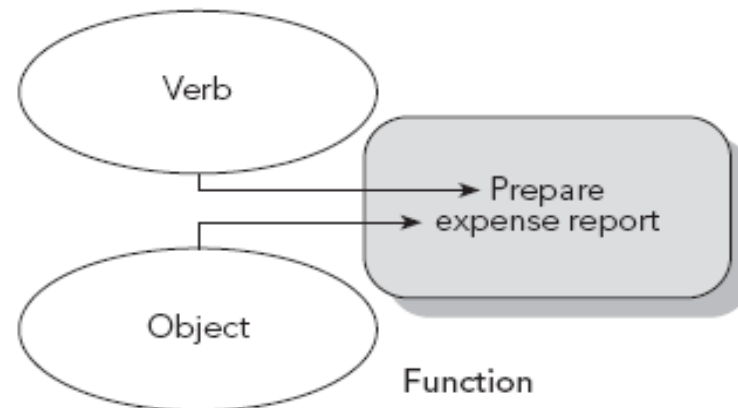

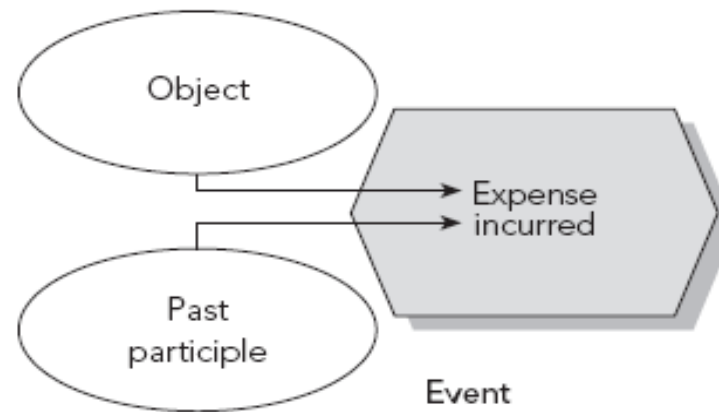

## ❖ Event-driven Process Chain (EPC) format

- Uses only two symbols to represent a business process
- Matches the logic and structure of SAP's ERP software design
- Two structures: events and functions
  - Events: a state or status in the process
  - Functions: part of the process where change occurs

# Event-driven Process Chain (EPC) Diagrams [2]

## ❖ EPC components

# Event-driven Process Chain (EPC) Diagrams [3]

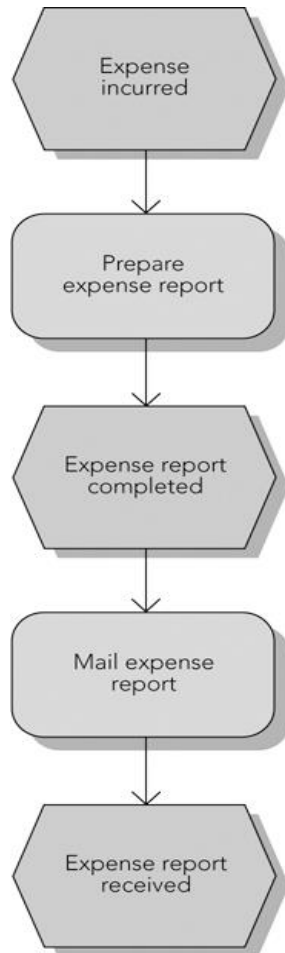

- ❖ EPC software
  - Enforces an event-function-event structure
  - Standardized naming convention for functions and events
- ❖ Three types of branching connectors
  - AND
  - OR
  - Exclusive OR (XOR)
- ❖ Basic EPC diagram can be augmented with additional information

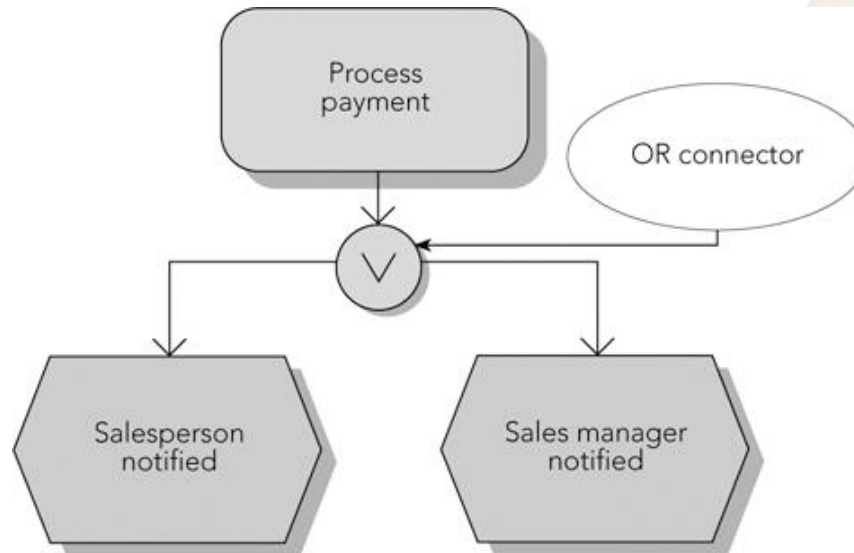

# Types of Branching Connectors

## ❖ Basic EPC layout

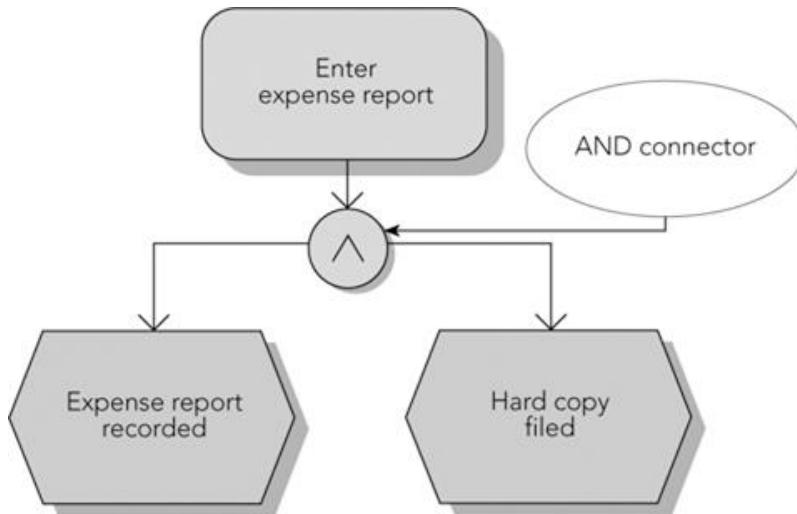

## ❖ OR connector

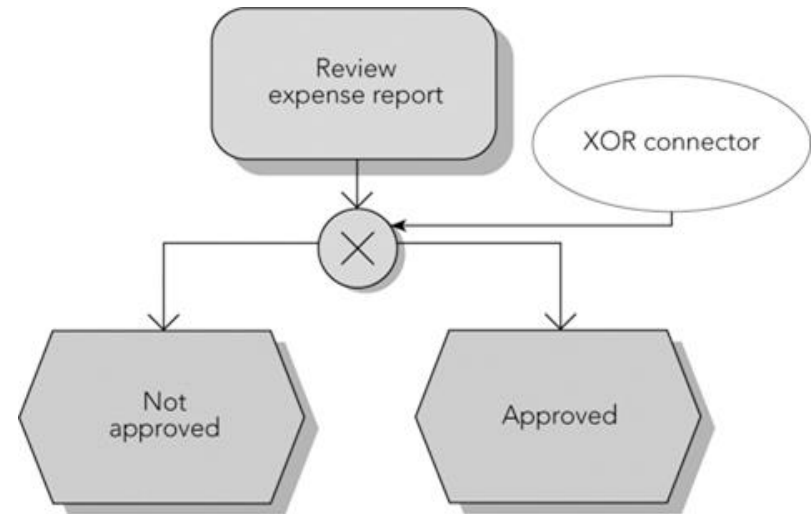

# Types of Branching Connectors [2]

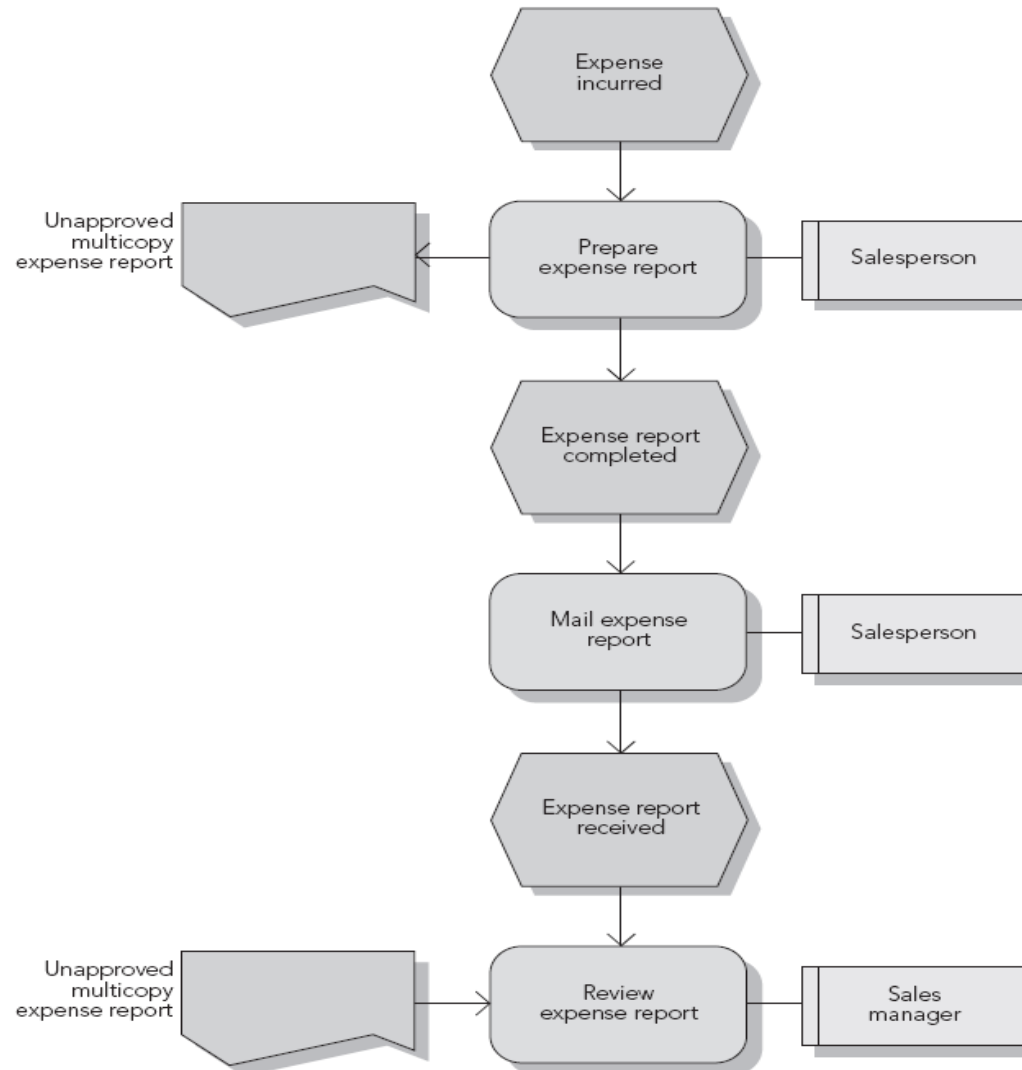

## ❖ AND connector

## ❖ XOR connector

# EPC Diagram with Organizational and Data Elements

# Process Improvement

# Process Improvement

## ❖ Value analysis

- Each activity in the process is analyzed for the value it adds to the product or service
- **Value added** is determined from the perspective of customer
- *Real value*: value for which the customer is willing to pay
- *Business value*: value that helps the company run its business
- *No value*: an activity that should be eliminated

# Evaluating Process Improvement

- ❖ Disrupting the current process to make changes can be costly and time consuming
- ❖ **Dynamic process modeling** takes a basic process flowchart and puts it into motion
  - Uses computer simulation techniques to facilitate the evaluation of proposed process changes
- ❖ Computer simulation
  - Uses repeated generation of random variables that interact with a logical model of the process
  - Predict performance of the actual system

# ERP Workflow Tools

## ❖ **Workflow tools**

- Software programs that automate the execution of business processes and address all aspects of a process, including:
  - Process flow (logical steps in the business process)
  - People involved (the organization)
  - Effects (the process information)

## ❖ ERP software provides a workflow management system

- Supports and speeds up business processes

## ❖ **Workflow tasks:** links that can include basic information, notes, documents, and direct links to business transactions

## ❖ SAP system can:

- Monitor workflow tasks
- If the tasks are not completed on time, can automatically take various actions

# SAP ERP Workflow Builder Screen

Workflow Builder - Change 'fomabs' [Active,Saved]

Workflow: WS70000704  
Version: 0007 (0006) Definition  
Status: Active,Saved

Navigation area

- 000059 Delete notification of absence
- 000069 Set indicator
- 000078 Send long text after approval
- 000087 Create notification of absence
- 000091 Set flag

Insertable Step Types

Step Type

- Insert Outbox
- Activity
- Web activity
- Send Mail
- Form
- User Decision

# ERP Workflow Tools [2]

- ❖ Workflow provides a number of useful features
  - Employees can track progress of workflow tasks
  - System can be programmed to send reminders to employee(s) responsible for a task
  - For sporadic processes, workflow tools are a powerful way to improve process efficiency and effectiveness

# ERP Implementation

# Implementing ERP Systems

- ❖ Late 1990s: many firms rushed to implement ERP systems to avoid the Y2K problem
- ❖ Since 2000: pace of implementations has slowed considerably
  - Most Fortune 500 firms have implemented an ERP system
  - Current growth is in the small to midsized business market
- ❖ Implementation of ERP is an ongoing process

# Implementation and Change Management

- ❖ Key challenge is not in managing technology, but in managing people
- ❖ ERP system changes how people work
  - To be effective, change may have to be dramatic
  - Business processes that are more effective require fewer people
  - Some employees may be eliminated from their current jobs

# Implementation and Change Management [2]

- ❖ **Organizational change management (OCM):** managing the human behavior aspects of organizational change
- ❖ People do not mind change, they mind *being* changed
- ❖ If ERP implementation is a project that is being forced on employees, they will resist it
- ❖ When employees have contributed to a process change, they have a sense of ownership and will likely support the change

# Implementation Tools

- ❖ Many tools are available to help manage implementation projects
  - Example: process mapping
- ❖ SAP provides Solution Manager tool
  - Helps companies manage implementation of SAP ERP
- ❖ In Solution Manager, ERP implementation project is presented in a five-phase Implementation Roadmap:
  - Project Preparation (15 to 20 days)
  - Business Blueprint (25 to 40 days)
  - Realization (55 to 80 days)
  - Final Preparation (35 to 55 days)
  - Go Live and Support (20 to 24 days)

# Implementation Roadmap in Solution Manager

**Implementation Roadmap (V2.0A)**

Project

Roadmap

- Implementation Roadmap for mySAP.com
  - 1 Project Preparation
    - 1.1 Initial Project Planning and Kick-Off
      - 1.1.1 Transition from Discovery and Evaluation to Project Preparation
      - 1.1.2 Enterprise Strategy Framework
      - 1.1.3 High-Level Business Requirements Review
      - 1.1.4 Project Charter
        - 1.1.4.1 Organize Workshop for Detailing Project Charter
        - 1.1.4.2 Define Project Mission Statement
        - 1.1.4.3 Define Project Goals and Objectives
        - 1.1.4.4 Define Project Scope
        - 1.1.4.5 Define Implementation Methodology
        - 1.1.4.6 Develop Organizational Change Strategy
        - 1.1.4.7 Create Initial Project Plans
        - 1.1.4.8 Define and Select Deliverables for Project Charter
        - 1.1.4.9 Review Project Charter with Technical Team
        - 1.1.4.10 Assemble and Approve Project Charter
      - 1.1.5 Project Organization
        - 1.1.5.1 Define Project Organization and Communication
        - 1.1.5.2 Conduct Project Team Transition
      - 1.1.6 Kick-Off Meeting
    - 1.2 Project Procedures and Standards
    - 1.3 Ongoing Project Management
    - 1.4 Training Plans
    - 1.5 Quality Management Project Preparation
    - 1.6 Milestone: High Level Business Requirements Review
  - 2 Business Blueprint
  - 3 Realization
  - 4 Final Preparation

## Organize Workshop for Detailing Project Charter

### Use

In an ideal case the *Project Charter* containing all deliverables from the *Discovery and Evaluation* Phase is available to the project team during the implementation.

It is important to review these documents carefully and to start corrective actions if necessary. The scope and complexity of these corrective actions depends very much on the completeness, the consistency and the level of detail of these documents.

Project Team Member | Messages | Proj. Documentation | Keywords

# Implementation Tools [2]

## ❖ Project Preparation

- Organizing technical team
- Defining system landscape
- Selecting hardware and database vendors
- Defining project's scope

## ❖ Business Blueprint

- Produces detailed documentation of business process requirements of the company

# Implementation Tools [3]

## ❖ Realization

- Project team members work with consultants to configure the ERP software in development system

## ❖ Final Preparation

- Testing the system throughput for critical business processes
- Setting up help desk for end-users
- Setting up operation of the Production (PROD) system and transferring data from legacy systems
- Conducting end-user training
- Setting Go Live date

# Implementation Tools [4]

## ❖ Go Live and Support

- Company begins using new ERP system
- Monitoring of system is critical so that changes can be made quickly if performance of the system is not satisfactory
- Important to set a date at which the project will be complete

# System Landscape Concept

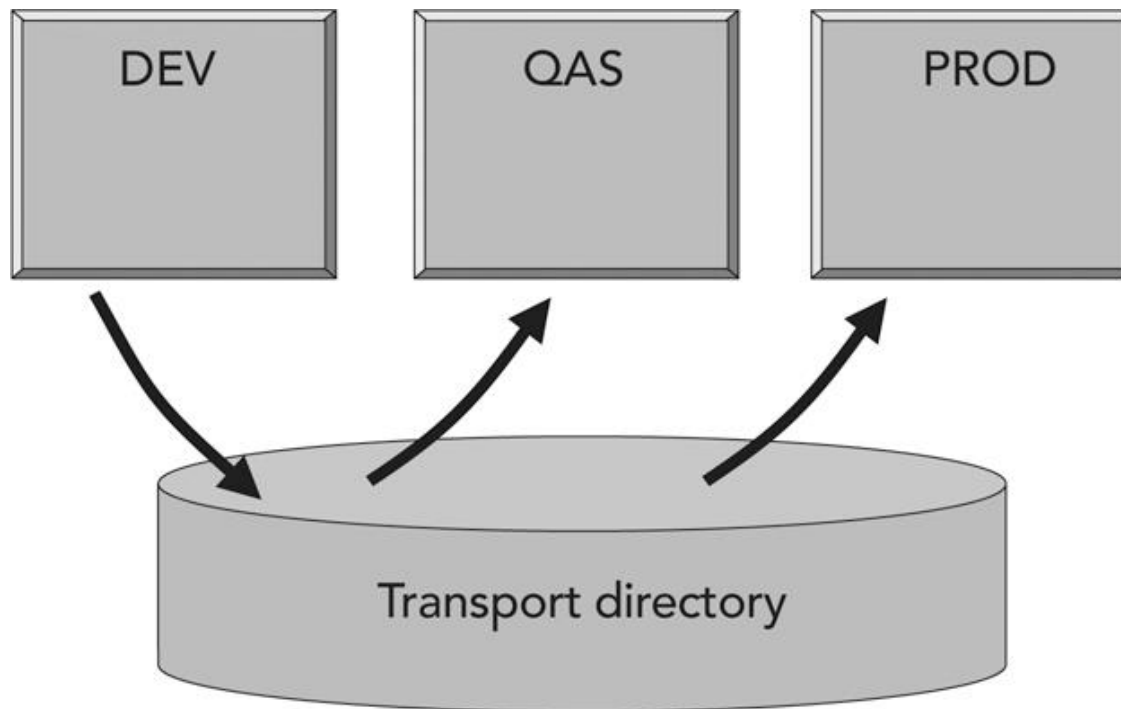

- ❖ SAP recommends a system landscape for implementation
  - Three completely separate SAP systems:
    - **Development (DEV)**
    - **Quality Assurance (QAS)**
    - **Production (PROD)**
  - **Transport directory:** special data file location on DEV server

# System Landscape Concept [2]

- ❖ System landscape for SAP ERP implementation

# System Landscape Concept [3]

- ❖ Development (DEV) system used to develop configuration settings and special enhancements using ABAP code
- ❖ Changes recorded in transport directory
- ❖ Changes imported into QAS system
- ❖ QAS system: changes are tested
- ❖ All settings, programs, and changes that pass testing are transported to PROD system
- ❖ PROD system: used by company to run its business processes

# Summary

## ❖ Business processes

- ERP systems are designed to provide the information, analysis tools, and communication abilities to support efficient and effective business processes
  - Process modeling: fundamental tool in understanding and analyzing business processes
- ❖ Process mapping: process-modeling tool that uses graphical symbols to document business processes
- ❖ SAP's Solution Manager: set of tools and information that can be used to guide an implementation project
- Included in SAP ERP to help manage the implementation of ERP software
- ❖ SAP's system landscape was introduced to show how changes to ERP system during implementation (and beyond) are managed
